**Team GDD.** One PDF per team, uploaded by every member and committed to the repo. Put the author's name on each section. Seven sections:

1. **Core loop** in one sentence.
    a. A group of store employees works a late shift where they must complete tasks around the store while a monster that mimics them hunts them down.
2. **The systems**, one per member. Name, owner, state it owns, what it does.
    a. Store Manager: Anthony- the NPC that gives players bonus tasks either by walkie-talkie or store intercom
    b. Store Environment: Caleb - The generic/basic tasks that must be completed in addition to whatever the manager says, as well as the various hiding spots available to the players
    c. Worker Survival System: Jarman - Owns the state for each worker's held items, usable tools, defensive abilities, powerups, and temporary effects.
    d. Jeremiah: Mimic in player/monster/narrator voices and movements/ Multiplayer systems / Monsters movements
3. **The seams.** At least two, every system on one. For each: which system writes the value, which reads it, and what decision the reader makes.
    a. Manager giving a task over the intercom to the players (writing) the monster can also hear it (reading) and knows where to expect them.
    b. Caleb - Store tasks/hiding: The basic closing/opening tasks that the players do throughout the game, some which require tools (talks between worker system), when a manager person adds a task, it's prioritized over the other tasks (reading).
4. **The familiar thing**, what makes it turn, and how that changes what the player does.
    a. The monster takes on the form, behaviors, and voices of the other players in the game. It makes each player feel as if they cannot trust the other person, even if they're conversing.
5. **The monster.** At least three rules. For each: the state it reads and how a player figures it out. Then your predicted scariest moment, where it happens, and which rules are in play. Caleb:
    a. The monster can only run for 13 seconds due to it being out of shape/out of its prime
        i. By outrunning the monster
    b. The Monster will change to attack you when in range for a certain amount of time
        i. Testing how close they could get to the monster or just avoiding the monster entirely
    c. The Monster will appear to each player at least once in the night, whether in the true form or disguised as someone. And it may not come up to you but it will be in your LOS.

    i. The player would notice after certain encounters that the monster had appeared to them a few times before actually coming to them directly, whether it was behind a crate or somewhere in plain sight.

The scariest moment will be when you think you're stocking an aisle with your friend but the mimic changes it appearance to attack/chase you and this uses rules a and b.

6. **Art direction.** Every field from your art sheet except the reference screenshots, one sheet for the team.

## World in One Sentence

A dark, low-poly supermarket after midnight, where four employees in bright orange uniforms complete their shifts under flickering fluorescent lights while a creature disguised as one of them stalks the aisles.

## Color Palette

- **Primary Background: Midnight Charcoal (#171B1A)** – Dark store interiors, shadows, and unlit areas.
- **Core Safety Orange: Industrial Orange (#E87932)** – Employee uniforms, making players recognizable from a distance.
- **Core Industrial Green: Faded Olive (#626D58)** – Shelves, storage rooms, and worn store equipment.
- **Accent Yellow: Fluorescent Cream (#D8D3A8)** – Overhead lighting, illuminated signs, and checkout areas.
- **Warning Accent: Emergency Red (#B93B32)** – Alarm lights, emergency exits, and danger indicators.
- **Structural Accent: Concrete Gray (#444A48)** – Floors, metal shelving, walls, and industrial surfaces.

## Camera and Framing

First-person perspective with a 95° field of view, slight camera sway while walking, and subtle movement while sprinting. Narrow aisles and tall shelves limit visibility, making players constantly check their surroundings.

## Light

Dim fluorescent ceiling lights with occasional flickering, creating alternating bright and dark sections throughout the store. Emergency red lighting appears in certain areas, while storage rooms and back hallways have limited visibility.

## Edge and Detail

Simple, low-poly 3D models with slightly pixelated textures inspired by Lethal Company. Store shelves, products, shopping carts, and employee uniforms use recognizable shapes without excessive detail. Characters have simple silhouettes so the monster can convincingly disguise itself as another player.

## Mood

Unsettling, isolated, tense, and unpredictable. The supermarket should feel like an ordinary workplace that becomes increasingly threatening as players separate and struggle to identify who is real.

## Style Suffix

Stylized low-poly survival horror, retro 3D graphics, industrial supermarket environment, bright orange employee uniforms, dark desaturated colors, eerie fluorescent lighting, deep shadows, subtle pixelated textures, minimal environmental detail, atmospheric horror, Unity/Godot game aesthetic.

## Avoid List

Avoid: Photorealistic graphics, overly detailed textures, bright colorful environments, cartoonish monsters, excessive gore, complicated character models, heavy motion blur, excessive visual noise, and lighting that makes navigation impossible.

## Anchor Asset

**Supermarket Employee:** A simple low-poly worker wearing a bright orange uniform with dark gloves, black boots, and a small employee badge. All players share the same basic uniform style, with small identifying differences. The monster copies their appearance but may display slightly unnatural movements or poses that observant players can notice.

7. **Scope.** What is in, and three cuts.
    a. In: Hiding spots, stamina/sprinting, task checklist
    b. Out: Monster health, weapons, in-game voice chat
